Historical Overview 1.1 Importing Points Autocad Civil 3D (AutoCAD Civil 3D) is the part of AutoCAD software package. It helps users to draw and edit drawings. One of the most fascinating features in AutoCAD is the ability to import data directly into the program. Several shapes are available that can be used to import data into AutoCAD. We can import points into AutoCAD to draw a line or a circle. These are limited to one or two points, depending on the style of the object. If the shape is more complex, it can import data into the program. Chapter 2. Importing Points Into AutoCAD Civil 3D 2.1 Types of Shapes Points are divided into two types: Straight Line Dashed Line Points are great for defining precise measurements on drawings. You can directly draw a line using points. Published: 05/11/2013 Category: Rendering Author: Mastering Autocad Civil 3d 2013 Pdf Free Download Download Description: This PDF tutorial is for an introductory Civil 3D tutorial Introduction to Civil 3D The Mastering Autocad Civil 3d 2013 Pdf Free Download PART 1: Importing Points into Civil 3D Importing Points into Civil 3D Tutorial In this tutorial I will provide a comprehensive introduction to using the user's familiar points and annotate tools to quickly create topographic and hydrologic models that can be subsequently converted into GIS-ready geo-data. Introduction The creation and creation of topographic models and hydrologic models from aerial images is a multi-day project. For the purposes of this tutorial, I am going to teach you how to create topographic models and hydrologic models in Civil 3D from a single aerial image. The image above is a screenshot from my aerial image library that I have stored in Civil 3D. In this tutorial we will use this image to produce a topographic model in Civil 3D. The image above was taken from the JIPA topo map, it is an aerial image that has been topographically mapped and documented for publication. Therefore, this aerial image would be considered a digital top. I have assigned a value of 0.0002 for the positional accuracy in the attributes. The value is arbitrary and only supports my thesis on the image. The attributes we need to use for Civil 3D are: Points - Points - Arrows I will use this aerial image to demonstrate how to import points into Civil 3D and how to assign attributes to features within Civil 3D. Using the Import Points into Civil 3D Tutorial Step 1: Open the image in your default image editor. In this tutorial I use Corel Draw. Step 2: The image I am using is saved as jpeg, if the image is saved in a different format such as.tif,.tiff, or.jpg try saving it in.jpg format. Step 3: Select the "points" tool in the "draw" category. Step 4: Double click on the image. The image should open in your default image editor. Step 5: Click and hold down on the left
