Today my HP Envy 4 got stuck and couldn't bring it up. I had to turn it off completely by hitting the power button. To bring it back up, i need to press the Power button and hold it until "Turn on #454" appears. When it appears, it goes away and then it goes into "HP System Status" screen for a second or two. After that, it goes back to "Turn on #454" screen. I did the same thing today and was able to bring my laptop back to life, but when I closed the lid and unplugged the power cable, it won't turn back on again. I've tried to give it a couple of times and have trouble getting it to turn on. It seems like it is not getting enough power from the charger. HELP! I feel like I need to run a Full Charge to get it to turn back on. Please let me know if you have any suggestions. Thank you! A: I've had trouble with HP's 13' and 15' touchpads on their ultrabooks also. I opened the unit and tried to turn the touchpad itself on and off. As long as it was OFF, the machine will turn back on. I tried using the FN (fn) key to turn the touchpad on or off to no avail. I'm using a HP ENVY 600 15R and a Samsung Series 5, so sorry in advance if it's not applicable to you. Best of luck if you get it working. Q: How to get an XNA 4 game and XNA game studio to coexist? I have written a XNA 4 game. I am planning on porting it to the latest version of XNA. The plan is to keep writing new content for the game and the client project containing only native XNA functionality. How should I make sure that the game will be able to be developed? I would prefer not to touch the client project on a regular basis, so I'm thinking about just making the game part a separate project to begin with. Is this a good idea? A: This is possible if you use the XNA Game Studio template. By using this template, you not only get the XNA libraries that you'll need to build your game, but you can configure it to build and debug only the game content project. You can still reference the XNA frameworks in your game project,
