The most powerful and most popular graphics program for creating and editing vector graphics is Illustrator (`www.adobe.com/products/illustrator`). Some photographers use it to make their own logos. In addition to being a full-featured image editor, Photoshop has the ability to design and import textures for use in 3D graphics. This kind of image is commonly called a bump map. Many computer graphics programs also have the ability to create and edit 3D objects, as I explain in the next section. The difference between these programs is how they import and animate 3D objects. Photoshop is also popular as a photographic image-editing program. Several good tutorials online demonstrate using the controls to touch up images or add special effects such as lens distortions, vignettes, sepia tones, or watermarks. You can import, animate, and edit 3D objects in 3D Studio Max. While not as popular as Photoshop, it is a big name that gives you a whole new world of design and 3D modeling. (You may be able to download a copy of 3D Studio Max for free from `www.xbox.com`.) I cover 3D Studio Max in Chapter 15. Finding the right program for you When trying out a new program, it's always important to test what you can and can't do. The following list is a quick rundown of the most popular photo-editing programs. Adobe Photoshop: A full-featured program that can be used to create and edit raster images. Adobe Elements: A lower-cost, less feature-rich program that can be used to create and edit raster images. (This program is part of the Adobe Creative Suite.) It's more targeted at consumers than the full Photoshop program. (`www.adobe.com/creative-suite-elements.html`) Illustrator: A vector graphics program that can be used for logo creation and importing textures. It's great for art students and those with a background in other drawing programs. (`www.adobe.com/products/illustrator`) Corel Photo-Paint: A common choice for creating photorealistic images. (`www.corel.com`) If you don't have access to Adobe Photoshop or any of the other programs mentioned, feel free to look into other programs available, but be warned that it's not easy

Photoshop and Photoshop Elements work side-by-side in the same Photoshop file, so you can use Photoshop Elements to edit images with the features you need, then use Photoshop to refine and enhance them. If you like to create graphics yourself, use Photoshop Elements to create simple, low-resolution images, then use Photoshop to build your graphics from a simple base. Photoshop Elements can also be used as an advanced image editor that supports various RAW image formats and RGB and CMYK color spaces. Photoshop Elements is easier to navigate than Photoshop, but advanced tools are available to make it a professional image editor. Create JPEGs To create JPEGs in Photoshop Elements, choose File>Create>JPG (or JPEG). You can also convert RAW images to JPEGs. To create an exact copy of a JPEG, choose File>Create>Image from Clipboard. To create RGB or CMYK JPEG images: – Click on an image in your folder. – Click on the Tags tool. A panel opens. – Choose a color space in the drop-down menu. – Click on the Add a Spot Color button. A dialog box opens where you can select the color you want to add. – Make sure Fill and Stroke has not been checked. – Click OK. Use the effects and filters To apply effects to an image, click on Filter>Applied>Apply in the Photoshop Elements dialog box. Photoshop Elements provides five effects and filters: Brightness/Contrast, Hue/Saturation, Curves, and Blur/Sharpen. The brightness/contrast filter uses the amount of light in an image and is also known as the Gamma filter. You can use it to lighten or darken an image to make it more vivid and intense. You can also use the filter to bring out some details in an image. Use it slowly, adding 10 to 30 percent brightness/contrast to darken a dark image or 20 to 50 percent to lighten a light image. The hue/saturation filter affects the colors in an image. You can use it to change the colors in an image to make them more vivid or to reduce the colors. You can control the change using a color wheel in the dialog box. The curves filter uses a set of pre-defined curves to change the tones in an image to create any effect you want. 05a79cecff

While New Zealand is taking a cautious approach to its preparation for an influx of asylum seekers expected to arrive next month, its immigration chief expects the country will receive the same number of asylum seekers as other member states, despite a dramatic reduction in refugee numbers from Australia. NZ's Immigration Minister Michael Woodhouse said last month that New Zealand was taking a cautious approach given the large number of asylum seekers who were expected to arrive in the country. The country's minister for the Law Commission, Bill English, said in October that the country could expect to receive 1000 to 2000 refugees from different regional groups, including Indonesia, Malaysia, and the Philippines. "Other countries generally (say) about 25 to 50 percent of their refugee intake comes from Indonesia," he said. "If you did the math, you'd say we'd probably get somewhere between 1000 and 2000." In September, when Mr. Woodhouse announced that arrivals from Australia were expected to peak over the month of November, he said that New Zealand had spent the last 12 months "devising and developing a system that can deal with these arrivals." New Zealand's public service minister, Winston Peters, made similar comments in late October, when he said the government had trained staff to assist asylum seekers arriving from Australia with their first steps in New Zealand. Asked about Mr. Peters' comments on Monday, Mr. Woodhouse said that there was always a risk when setting up a regional processing facility that the newly arrived asylum seekers could overwhelm the system. "Sometimes there are positive outcomes and, occasionally, there are not, but we've got to be prepared to deal with whatever situation we might receive," he said. "If you look at the countries that are potentially the most likely host countries, there is the possibility that there might be more people. We are expecting that there might be as many people, if not more." Mr. Woodhouse said that his department is helping to prepare for any influx of asylum seekers arriving from Australia, but warned that it was difficult to accurately predict the number of asylum seekers New Zealand is likely to receive. "It's not about the volume," he said. "It's more about the variety, the number of people who will come through."
