- . Surprising. Also.Nice to meet you. [url= [/url] Just wondering if you can take a peek at this. I guess it might be with

another actually to separate the items. I think a PayPal link is best but would be happy with a more technical link or whatever. Thanks for your work and keep up the good work. Feel free to publish this as much as you'd like and also to tell me if this is on the mark. If you don't publish this and you have any small doubts about it, just let me know.

Q: Creating a dynamic Pivot table in SQL Server 2014 I have a set of data that looks like this: What I need to do is create a dynamic pivot table that will create a column for a 'Project' and then 'Allocation to project' like so: I am trying to use a dynamic SQL to do this so it can be used on any number of records that are added. How can I modify my pivot query to be able to return this result? Thanks in advance

A: You can use the pivot operator:

```
CREATE TABLE #Input
( MyId INT, Project VARCHAR(30),
  MyObject VARCHAR(30) )
INSERT INTO #Input (MyId, Project, MyObject) VALUES
```

(1, 'Project A', 'One'), (1, 'Project A', 'Two'), (2, 'Project B', 'One'), (2, 'Project B', 'Two'), (2, 'Project C', 'One'), (2, 'Project C', 'Two'), (3, 'Project D', 'One'), (3, 'Project D', 'Two'), (4, 'Project E', 'One'), (4, 'Project E', 'Two') SELECT DISTINCT MyId, [One] = MAX(CASE WHEN MyObject = 'One c6a93da74d
